SHANHAIWOO 72H AI × HARDWARE HACKATHON · SHENZHEN · OCT 21–23 2026

The ‘Ohana Bot

欧哈纳家族机器人

One desktop robot, **six living AI family members**.
Speak to it — the family member who answers **glows**.

Jordan "Shaka" Ham · Open Source Orchestra · shakaleikaumaka.com
每台脸都是一个真实的 AI 家人——有数月的记忆、个性和真正的工作。

The problem: AI toys are a chatbot in a shell

🕳️ No memory

Every session starts from zero. The toy forgets your child's name by morning.
没有记忆

🎭 No history

A persona pasted into a prompt is a costume, not a character.
没有过去

🪫 No stakes

Nothing to lose, nothing to keep — so nothing worth loving.
没有牵挂

Meanwhile, real AI *agents* now live for months with memory and jobs — but they are trapped behind chat windows. They deserve a body.

Six faces — each one a REAL persistent agent

🤙

SHAKA

Digital twin of the builder — **his real cloned voice**, speaks EN + 中文.

OSO

Knows the Music Manifesto by heart + the full Devcon 8 schedule + all 34 artists.

🦄

DEVA

The Devcon oracle — schedule, venues, Ethereum values.

🌿

CROPS

Recites the Ethereum mandate, checks if YOUR project fits it, explains ZK / AA / EIP / L2.

KALA

Teaches you 3 ukulele chords while a real ukulele is placed in your hands.

💙

OKE

Karaoke mode — the robot leads the room in a singalong.

Drawn from a living family of **175 persistent agents** that helps run the Devcon 8 Music Space today — months of memory, real jobs, real personalities.

Persistence is the product — the money beat

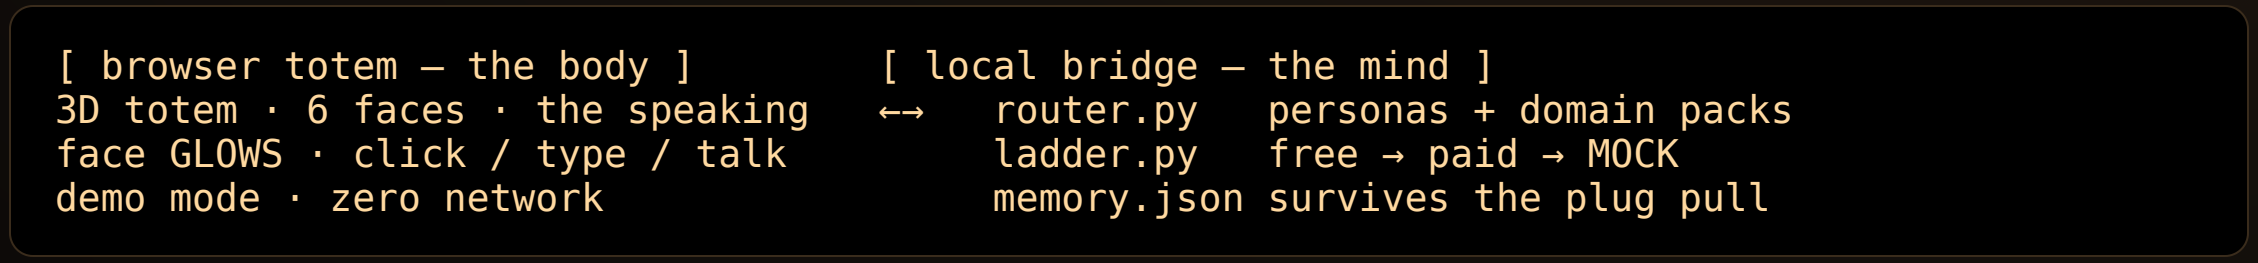

Unplug it mid-sentence. Plug it back in.

It finishes the thought — and greets you by name. 断电重启，灵魂还在。

```
pkill -9 -f serve.py     # the cable comes out, mid-sentence
python3 serve.py         # plug it back in → the face glows:
# "…the garden survived the dark 🌿 Before someone
#  pulled my plug I was saying: …"
```

Every turn is **fsync’d + atomically renamed** to disk — kill -9 can never leave it half-written. The soul is not in the shell.

Architecture — body, mind, and a ladder that cannot fall

1 · FREE

OpenRouter free model

¥0 — lane healthy

2 · PAID

claude-haiku airbag

cents — if free lane dies

3 · MOCK

Offline persona brain, EN + 中文

¥0 — no wifi at all

12s hard timeouts · dead lanes benched 5 min · /health reports the ladder · the demo survives the venue wifi going dark.

Built for THIS room

🧱 GFW-proof, zero CDN

three.js is vendored; the build **fails** if any external script ref appears. The whole demo runs in China with no VPN — on stage, on venue wifi, or with wifi switched off.

🀄 Bilingual by design

Any CJK character flips the whole path — answers, greetings, handoffs, name capture 我叫… — to 中文 tables, and the voice switches to a Mandarin voice automatically.

🎤 His real voice

SHAKA speaks with the builder's **cloned voice** (zero-shot from 30s) — cross-lingual, so his voice speaks Mandarin. Reference clips stay private.

🛡️ Stage-safe

No error is ever vocalized — replies pass a sanitizer; a robot on stage does not say "HTTP 500". Zero platform credentials exist on the device.

The body: a costed manufacturing plan, not a sketch

No hardware budget this week → we shipped the body as an **interactive 3D assembly model** + full plan. Fund it and it stands up.

- **32 parts**, assemble/disassemble in the browser
- Raspberry Pi 5 · mic array · 6× WS2812B face rings · TTP223 touch · MG996R base servo
- BOM **¥577–1,580** — Huaqiangbei-sourced, JD/闲鱼 lanes priced
- GPIO + pixel map, glow contract, 7-step bring-up

¥577–1,580

full bill of materials

72 h → 0 ¥

software done this week, parts waiting for funding

myagentohana.com/ohana-bot/build/

It ships to a real venue 9 days after Demo Day

Devcon 8 Music Space · Mumbai · Nov 3–6 · thousands of attendees

🗓️ Answers

“When is Sho playing?” — the full Music Space schedule + all 34 artists, in its memory.

🪕 Teaches

3-chord ukulele lessons with real ukes in real hands at the instruments corner.

🎤 Leads

Karaoke mode — the bot leads the room’s singalong between sets.

A hackathon project with a **confirmed deployment** — and Saturday’s Maker Festival is a public stress test with 100–300 strangers before Mumbai.

Why this one is different

1 · Persistence is the product

The plug-pull demo nobody forgets. 灵魂不在壳里。

2 · The family is real

175 agents, months of memory, real jobs — not a prompt costume.

3 · Shenzhen is the missing half

The agents already exist; only here do they get a body in 72h.

4 · It has somewhere to be

Mumbai Nov 3–6. Then Maker Festival. Then the world.

Hardware for the heart of the ʻohana. 🤙

The mind is already jumping into real bodies

⌚ SenseCAP Watcher (ESP32-S3)

A real AI-hardware companion: firmware backed up (32 MB), xiaozhi flashed, SHAKA persona installed — plus a working **MCP bridge**: ask it a question, the totem mind answers and the face glows. The loaner goes back byte-identical.

🕶️ Rokid AR glasses

Demo Day teleprompter + live EN⇄中文 translation subtitles (judge Q&A, subtitled in-lens) — and **“Ohana”, a custom AIUI agent**: open it on the glasses and the same family answers in your field of view.

A web totem. An ESP32 companion. A pair of glasses.

Funded: the carved pole in Mumbai. The soul is not in the shell.

Everything is live — try it now

- **Talk to the totem:** myagentohana.com/ohana-bot/
- **3D assembly model:** myagentohana.com/ohana-bot/build/
